

# Conception Avancée de Bases de Données

Merge Join without duplicates

DDL : langage de définition des données; DML : langage de manipulation des données

# Memory join algorithms

Nested loop

Merge join

Hash join

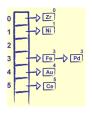

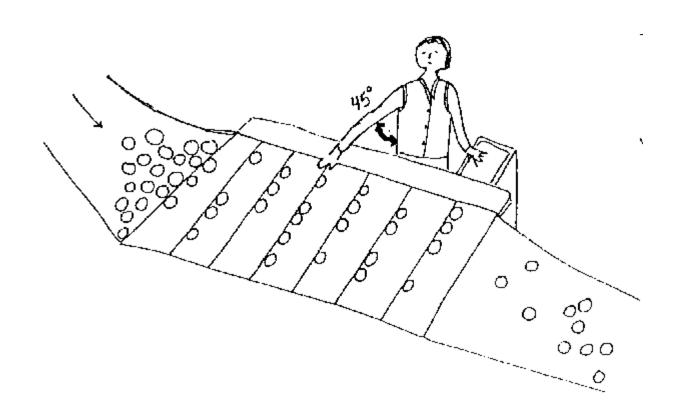

# Où sont les problèmes de performances ?

- Dans les opérations de comparaisons (Tests).
- NestedLoop (boucles imbriquées)
  - Complexité O(n2)
- Optimisation :
  - Comment réduire le nombre de tests ?

#### Il faut trier !!!!

# Merge Join

 Quand les tableaux sont triés l'opération de jointure s'appelle:

# Principe

- 1) trier les tableaux
- 2) fusionner les tableaux

# R Triée
